

Screenshot 2: Credential Form Submissions (Tally)

Suggested Caption:

"Screenshot of active Mint Unit creation form submissions using Tally. Entries include real-time data inputs beginning April 16, 2025, with continued testing through April 28, 2025. This confirms the front-end behavior trigger for Pro-Logic Shield's credential lifecycle system, initiating the Mint phase in each case."

What This Proves:

- **User behavior (form submission)** is being logged as a trigger event
 - The system was **operational and tested repeatedly**
 - You're not just theorizing the process — you're running **live inputs tied to backend logic**
-

Tips for Visual Context:

- If you crop or highlight the **first entry from April 16**, emphasize that as your **origin point**
- If possible, annotate or circle:
 - Date/time
 - The test input (e.g., Spencer Test man 5000 or "VOTE2024TEST123")
